

**Supplementary Table 3.** Prognostic factors for renal replacement therapy dependency according to type of malignancy

| Variable      | Solid malignancy |         | Hematologic malignancy |         |
|---------------|------------------|---------|------------------------|---------|
|               | HR (95% CI)      | p-value | HR (95% CI)            | p-value |
| Hypertension  | 2.42 (0.99–5.95) | 0.05    | -                      | -       |
| CKD           | 3.95 (1.69–9.24) | 0.001   | -                      | -       |
| CRRT duration | 1.05 (0.99–1.11) | 0.09    | -                      | -       |
| Oliguria      | -                | -       | 60.38 (1.02–3,576.82)  | 0.049   |
| Creatinine    | -                | -       | 8.29 (1.07–64.23)      | 0.04    |

CI, confidence interval; CKD, chronic kidney disease; CRRT, continuous renal replacement therapy; HR, hazard ratio.
