

Supplementary Table 2. Unplanned dialysis according to renal replacement therapy modalities

Variable	Total	Planned dialysis	Unplanned dialysis ^a	p-value ^b
HD	936 (100)	590 (63.0)	346 (37.0)	
eGFR at dialysis initiation	6.73 ± 4.25	5.96 ± 3.47	8.05 ± 5.07	<0.001
PD	102 (100)	96 (94.1)	6 (5.9)	
eGFR at dialysis initiation	5.60 ± 5.03	5.66 ± 5.06	4.67 ± 0.53	0.4
Total	1,038 (100)	686 (66.1)	352 (33.9)	
eGFR at dialysis initiation	6.62 ± 4.15	5.91 ± 3.40	7.99 ± 5.05	<0.001

Data are expressed as number (%) or mean ± standard deviation.

eGFR, estimated glomerular filtration rate; HD, hemodialysis; PD, peritoneal dialysis.

^aUnplanned dialysis group was defined as starting maintenance dialysis in a life-threatening situation regardless of a permanent access device in place.

^bWe compared eGFR at dialysis initiation between the planned dialysis group and unplanned dialysis group.
