

Supplementary Table 2. Comparison of AR, infection rate, and DGF according to induction therapy in donor AKI and non-AKI subgroups in the entire cohort

Variable	AKI (n = 401)			Non-AKI (n = 323)		
	Basiliximab (n = 219)	ATG (n = 182)	p-value	Basiliximab (n = 253)	ATG (n = 70)	p-value
AR	54 (24.7)	43 (23.6)	0.81	55 (21.7)	17 (24.3)	0.65
Infection rate	10 (4.6)	7 (3.8)	0.72	14 (5.5)	6 (8.6)	0.40
DGF	62 (28.3)	52 (28.6)	0.95	28 (11.1)	7 (10.0)	0.80

Data are expressed as number (%).

AR, acute rejection; ATG, antithymocyte globulin; DGF, delayed graft function.
