

Supplementary Table 3. Comparison of AR, infection rate, and DGF according to induction therapy in high-KDPI and low-KDPI subgroups in the entire cohort

Variable	High-KDPI (n = 370)			Low-KDPI (n = 354)		
	Basiliximab (n = 228)	ATG (n = 142)	p-value	Basiliximab (n = 244)	ATG (n = 110)	p-value
AR	58 (25.4)	40 (28.2)	0.56	51 (20.9)	20 (18.2)	0.55
Infection rate	13 (5.7)	7 (4.9)	0.75	11 (4.5)	6 (5.5)	0.70
DGF	44 (19.3)	39 (27.5)	0.07	46 (18.9)	20 (18.2)	0.88

Data are expressed as number (%).

AR, acute rejection; ATG, antithymocyte globulin; DGF, delayed graft function.
