

Supplementary Table3. Analysis of the association between carbon monoxide exposure and mortality according to cause of death

Cause of death	Model 1	Model 2
Cardiovascular disease		
Bidirectional	1.02 (0.79–1.33)	1.24 (1.04–1.47)
Unidirectional (pre)	1.02 (0.79–1.33)	1.22 (1.03–1.46)
Time-stratified (matched)	0.98 (0.75–1.30)	1.23 (1.03–1.47)
Infection		
Bidirectional	0.98 (0.67–1.44)	1.22 (1.03–1.46)
Unidirectional (pre)	0.98 (0.67–1.44)	1.07 (0.85–1.34)
Time-stratified (matched)	1.05 (0.70–1.57)	1.21 (1.003–1.45)

Data are expressed as odds ratio (95% confidence interval).

Model 1: two-pollutant model adjusted for confounders of temperature and sulfur dioxide; Model 2: two-pollutant model adjusted for confounders of temperature and particulate matter less than 10 µm in diameter.
