

Supplementary Table 2. Cumulative incidence of each component of cardiorenal outcomes in CKD and general populations during 9 years of follow-up

Population	Secondary composite outcome	Kidney disease progression	Kidney failure	Serum creatinine doubling	Major cardiovascular events	Critical ASCVD	Hospitalized heart failure	Cardiovascular death
CKD population	78,072 (7.0)	42,931 (3.8)	25,245 (2.3)	31,029 (2.8)	56,195 (5.0)	18,290 (1.6)	15,375 (1.4)	28,725 (2.6)
General population	26,325 (2.2)	18,042 (1.5)	3,166 (0.3)	16,513 (1.4)	23,598 (2.0)	9,776 (0.8)	5,333 (0.5)	11,181 (0.9)
Pooled cohort	96,588 (4.4)	56,735 (2.6)	25,940 (1.2)	44,444 (2.0)	74,112 (3.4)	26,252 (1.2)	19,090 (0.9)	37,023 (1.7)

Data are expressed as number of participants (%).

ASCVD, atherosclerotic cardiovascular disease; CKD, chronic kidney disease.
