

Supplementary Table 4. Reclassification tables for the predicted 5-year risk categories of <5%, 5% to <10%, and ≥10% by the addition of traditional measures to four-variable models

Observed event	Reclassification				NRI
	To lower risk category	No change	To higher risk category	Sum	
Primary composite outcome in CKD population					0.059399
Event (-)	76,656 (6.85)	849,669 (75.93)	98,357 (8.79)	1,024,682 (91.56)	
Event (+)	8,541 (0.76)	68,514 (6.12)	17,350 (1.55)	94,405 (8.44)	
Sum	85,197 (7.61)	918,183 (82.05)	115,707 (10.34)	1,119,087 (100.00)	
Primary composite outcome in the general population					0.034056
Event (-)	24,102 (2.03)	1,095,583 (92.17)	28,386 (2.39)	1,148,071 (96.58)	
Event (+)	2,357 (0.20)	34,198 (2.88)	4,064 (0.34)	40,619 (3.42)	
Sum	26,459 (2.23)	1,129,781 (95.04)	32,450 (2.73)	1,188,690 (100.00)	
Secondary composite outcome in CKD population					0.059878
Event (-)	53,583 (4.79)	919,329 (82.15)	68,103 (6.09)	1,041,015 (93.02)	
Event (+)	6,185 (0.55)	59,489 (5.32)	12,398 (1.11)	78,072 (6.98)	
Sum	59,768 (5.34)	978,818 (87.47)	80,501 (7.19)	1,119,087 (100.00)	
Secondary composite outcome in the general population					0.04938
Event (-)	10,314 (0.87)	1,136,279 (95.59)	15,772 (1.33)	1,162,365 (97.79)	
Event (+)	1,077 (0.09)	22,900 (1.93)	2,348 (0.20)	26,325 (2.21)	
Sum	11,391 (0.96)	1,159,179 (97.52)	18,120 (1.52)	1,188,690 (100.00)	
Kidney disease progression in CKD population					0.090568
Event (-)	10,593 (0.95)	1,028,528 (91.91)	37,035 (3.31)	1,076,156 (96.16)	
Event (+)	1,575 (0.14)	34,201 (3.06)	7,155 (0.64)	42,931 (3.84)	
Sum	12,168 (1.09)	1,062,729 (94.96)	44,190 (3.95)	1,119,087 (100.00)	
Kidney disease progression in the general population					0.022833
Event (-)	3,124 (0.26)	1,162,951 (97.83)	4,573 (0.38)	1,170,648 (98.48)	
Event (+)	182 (0.02)	17,195 (1.45)	665 (0.06)	18,042 (1.52)	
Sum	3,306 (0.28)	1,180,146 (99.28)	5,238 (0.44)	1,188,690 (100.00)	

Data are expressed as number (%).

The primary composite outcome was major cardiovascular events or kidney disease progression. The secondary composite outcome was major cardiovascular events or kidney failure. Kidney disease progression was defined as serum creatinine doubling or kidney failure.

CKD, chronic kidney disease; NRI, net reclassification improvement.
