

Supplementary Table 5. HRs for major adverse cardiovascular events, and composite outcome according to the Framingham risk score (patient without diabetes mellitus, n = 3,224)

Outcome	Univariable analysis		Multivariable analysis	
	HR (95% CI)	p-value	HR (95% CI)	p-value
Major adverse cardiovascular event				
Framingham risk score		<0.001		0.003
Quartile 1	Reference		Reference	
Quartile 2	3.46 (1.12–10.72)	0.03	4.07 (0.86–19.32)	0.08
Quartile 3	9.64 (3.36–27.60)	<0.001	10.44 (2.35–46.28)	0.002
Quartile 4	17.34 (5.90–50.99)	<0.001	12.70 (2.59–62.32)	0.002

Multivariable analysis includes covariates of donor type, primary causes of kidney disease, body mass index, desensitization, serum phosphorus levels, and donor-specific antigens.

CI, confidence interval; HR, hazard ratio.
